

GYNAMENO-PLUS

Each tablet contains :

Composition:

Tranexamine Acid500 mg
Mefenamic Acid.....250 mg

Indications:

For powerful control of painful bleeding.

Description:

Tranexamic acid (commonly marketed as Cyclokapron) is often prescribed for excessive bleeding. It is an antifibrinolytic that competitively inhibits the activation of plasminogen to plasmin. Tranexamic acid is commonly used to treat excessive menstrual bleeding, even to the point of menorrhagia. It is also useful in the treatment of haemophilia.

Mefenamic acid binds the prostaglandin synthetase receptors COX-1 and COX-2, inhibiting the action of prostaglandin synthetase. As these receptors have a role as a major mediator of inflammation and/or a role for prostanoid signaling in activity-dependent plasticity, the symptoms of pain are temporarily reduced.

Contraindications:

Mefenamic acid: is contraindicated in patients with active ulceration or chronic inflammation of either the upper or lower gastrointestinal tract. It should not be used in patients with preexisting renal disease.

Dosage: As per the physician's advice.

Presentations: 10 tablets
